

KAG-simple Project Workflow

- **Objective:** Build a lightweight, user-friendly application using Streamlit and Python for [briefly state purpose, e.g., *knowledge graph exploration / data annotation / internal tooling*—adjust as needed*].
- **Tech Stack:**
 - **Frontend/UI:** Streamlit (Python-based interactive web app)
 - **Backend Logic:** Python (standard libraries + relevant packages, e.g., `pandas`, `networkx`, `requests`, etc.)
 - **Deployment:** [e.g., Local/Streamlit Cloud/Docker—specify if known]

1. Adeel (Technical Lead)

- **Architecture Design:**
 - Lead the discussion and decision-making for the project's architecture.
 - Decide on the backend structure, Streamlit integration, and data flow.
- **Technology Stack Selection:**
 - Choose the appropriate libraries, frameworks, and tools for the project (e.g., Streamlit for the front-end, Python libraries for data processing, etc.).
- **Task Assignment:**

- Collaborate with Raheel to assign specific tasks to Saba based on the project requirements.
 - Ensure Saba understands the technical specifications and scope for each task.
 - **Code Reviews:**
 - Review the code written by Saba for quality, consistency, and adherence to best practices.
 - **Troubleshooting & Debugging:**
 - Provide technical support for any issues that arise during development.
-

2. Saba (Developer)

- **Streamlit Application Development:**
 - Develop the user interface using Streamlit. This includes:
 - Creating forms, buttons, and visualizations.
 - Connecting the UI with the backend (Python code).
 - **Backend Integration:**
 - Implement Python logic and algorithms that will be used in the application.
 - Integrate the backend with the Streamlit frontend, ensuring smooth interaction.
 - **Data Processing:**
 - Handle data collection, cleaning, and processing tasks (if applicable).
 - Implement data visualizations (graphs, charts) in the Streamlit app.
 - **Unit Testing:**
 - Write and execute tests to ensure the functionality of the application.
 - **Documentation for Code:**
 - Comment the code and document key functions for clarity.
-

3. Raheel (Coordinator)

- **Team Coordination:**
 - Serve as the bridge between the technical lead (Adeel), the developer (Saba), and the manager (Faizan).
 - Ensure smooth communication and clarity of tasks among all members.
- **Progress Tracking:**
 - Keep track of project milestones and deadlines.
 - Organize and conduct meetings to review the progress and address challenges.
- **Task Management:**

- Assist Adeel in defining and assigning tasks to Saba based on project requirements.
- **Feedback Loop:**
 - Provide regular feedback on the development process and ensure alignment with project goals.
- **Documentation Support:**
 - Help Faizan by providing necessary updates on the project progress for documentation purposes.

4. Faizan (Manager & Documentation)

- **Project Management:**
 - Oversee the overall project timeline, ensuring deadlines are met and resources are efficiently allocated.
 - Coordinate with Raheel to ensure smooth flow of information and updates.
- **Documentation:**
 - Record all the technical and non-technical details of the project.
 - Maintain proper documentation for:
 - System architecture.
 - Code structure and development practices.
 - Development progress, challenges, and resolutions.
 - Write user manuals or guides (if applicable).
- **Meeting Minutes:**
 - Document the outcomes of meetings, key decisions, and action items.
- **Quality Assurance:**
 - Ensure that the documentation is clear, thorough, and accessible for future reference.

Summary of Tasks:

Role	Tasks
Adeel (Technical Lead)	- Lead architecture design - Select technology stack - Assign tasks - Code reviews - Troubleshooting & Debugging
Saba (Developer)	- Streamlit app development - Backend integration - Data processing - Unit testing - Documentation for code
Raheel (Coordinator)	- Team coordination - Progress tracking - Task management - Feedback loop - Support documentation
Faizan (Manager & Documentation)	- Project management - Documenting system architecture - Meeting minutes - Quality assurance of documentation

Workflow

1. **Planning:** Adeel & Raheel define architecture → break down tasks
2. **Execution:** Saba develops features → Adeel reviews → iterate
3. **Documentation:** Faizan captures design rationale, decisions, and user-facing docs in parallel
